PlexConnect Business Voice (VoIP) for Broadband

All the features and reliability without the expensive PBX System, Local and Long Distance Charges.

Plexcom utilizes today's cutting edge technology and broadband connectivity to help your business communicate effectively for a fraction of the price of traditional voice services.

Plexcom's network features world-class engineering and a Super-POP architecture which minimizes use of the public Internet and places your VoIP calls just one hop away from most major internet backbone carriers. The Super-POPs, located in Las Vegas, Chicago, Atlanta and New York, are interconnected with high-capacity fiber links, creating a redundant VoIP Backbone that provides absolute best-case performance and economics for the movement of VoIP calls across the United States. Moreover, our architecture and network strategy virtually eliminates packet loss, jitter and latency across the continent and to the Public Service Telephone Network (PSTN), translating into higher quality calls and superior reliability.

Call 205-940-7878 today to find out the benefits of IP Telephony

Benefits

IP Telephony improves business efficiency through the deployment of new and enhanced applications that increase organizational speed and enrich client relations, while reducing communications and IT administration costs.

Reduction in Communications Costs

- Reduction in Local and Long distance Service costs
- Reduction in the investment of multiple network infrastructures
- Lower system expansion costs associated with deploying a single network
- Lower hardware connection costs within the organization
- Reduction of the number of wiring drops needed for deploying network expansions
- Allows employees to freely move about the office or offices, allowing companies to assign more workers to shared workspaces and managers to be accessible from multiple locations, thus maximizing ROI.

Reduction in IT administration costs:

- Centralized system management
- Consolidated IT staff – manage large user communities with a smaller staff
- Perform more critical IT functions internally instead of outsourcing
- Reduction in IT costs by allowing employees to install and relocate their own phones.

The business decision that you have to make is not "if", but "when" will the benefits of IP telephony outweigh the useful life of your existing phone system?

PlexConnect Service comes in Three Forms (HIP) Hosted IP PBX, IP Select and IP Trunking

(HIP) Hosted IP PBX

Hosted IP PBX (HIP) is the ideal and cost effective way to assure carrier grade voice transmission when a company finds the need to replace an outdated, outgrown or expensive PBX, Key System or Centrex Service. In a Hosted IP PBX model, the PBX resides on the Plexcom network and is constantly upgraded to the latest version. Each individual HIP user has their own dedicated call line with an incredible enterprise feature set which can be configured at the user level for maximum flexibility, usability and minimal administration. HIP provides the customer with a feature rich system that will save upfront capital, administration costs, and will reduce local and long distance charges. Hosted IP PBX (HIP) comes in three varieties; Enterprise Standard, Enterprise Premium and Enterprise Dial Tone.

IP Select

If the majority of the people in your office are not heavy phone users you can save additional monthly phone costs with PlexConnect IP Select. Like (HIP) Hosted IP PBX, IP Select is a hosted VoIP service with one main difference; the number of dedicated call lines can be exceeded by the number of extensions up to a 4 to 1 ratio. If you do not require a dedicated line for each office user IP Select may be the choice for you. IP Select comes with the Enterprise Standard Feature Set for all extensions.

IP Trunking

With PlexConnect IP Trunking you can realize the cost savings of VoIP while continuing to utilize your existing PBX/Key system. If you wish to streamline your communications platform while saving money, PlexConnect IP Trunking solution will enable you to converge your existing data and voice networks both economically and efficiently. You will realize immediate and significant economic advantages while enabling a smooth transmission to a Hosted IP PBX service.

Plexcom Business Advantage Service

Combine PlexConnect Business VoIP Service with Plexcom's Business Internet Service to create Plexcom's Business Advantage Service. Plexcom's Business Advantage Service offers business customers discounts up to 15% off our already low pricing. See our Plexcom Business Advantage Service for more information.
